

NBT EVO / A NEW EXPERIENCE

ExpertNBT OS

**Your iDrive.
New possibilities.**

Connected apps. Diagnostics inside the car. An integrated approach from BMW EXPERT.

Actual screen from the BMW EXPERT demonstration vehicle.

NBT EVO · subject to compatibility assessment

Authentic images, a detailed guide and a dated test catalogue. Includes limitations and installation requirements.

Powered by Metis Intelligence ↗

01 / CONNECTED APPS IN USE

Useful information. In familiar surroundings.

Detailed forecast: morning, noon, afternoon and night.

Weather

We verified current conditions and a detailed forecast, including temperature, rain probability and wind.

Online Search

The BMW EXPERT search returned a map, address, telephone and opening hours. No call was placed or guidance started.

An active ConnectedDrive subscription and service eligibility are required. On 25 October 2026, News initially returned an error. A retry loaded headlines and opened an article.

02 / BMW EXPERT DIAGNOSTICS

See what your modules report.

The application runs inside NBT EVO and presents fault memory by module. No external computer is needed to display the results.

Actual results screen from the demonstration vehicle.

15/15

successful module reads in the demonstration vehicle's completed report

01

Enter

ConnectedDrive → BMW EXPERT Diagnostics. Vehicle identity is checked for diagnostic operations.

02

Review

Modules, codes and available descriptions. Incomplete reads and unknown definitions remain visible.

03

Report

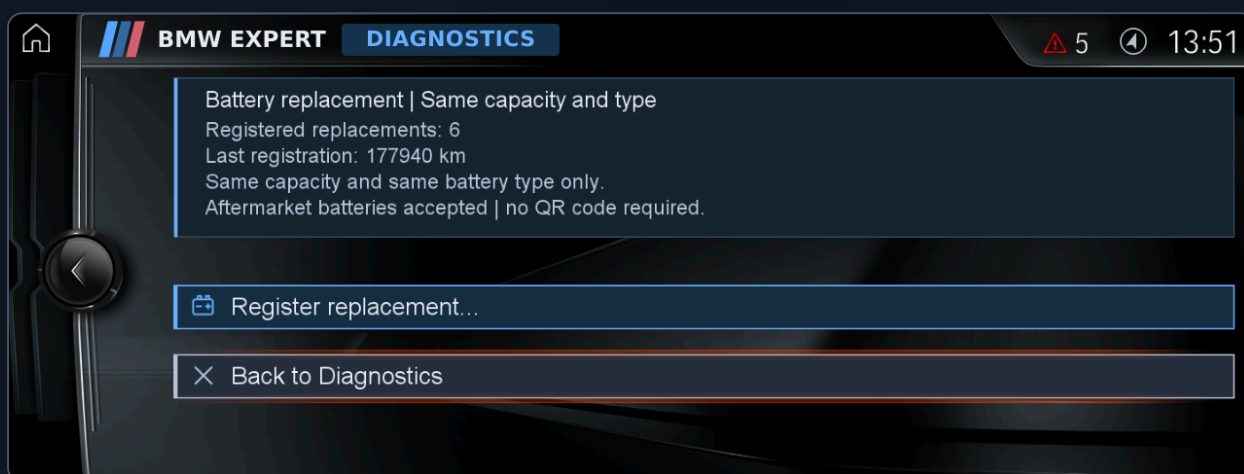

Return to the saved report and exit to iDrive. Coverage differs by vehicle.

Greek or English descriptions where verified definitions exist. "No Faults" refers to that read, not a complete vehicle health assessment. Faults were not cleared for this presentation.

Follow the interactive journey →

Information before a service decision.

The application separates reading information from performing maintenance. We checked service information and battery history without changing the vehicle's maintenance data.

Actual battery-history read. No new replacement was registered.

CBS

The vehicle returned brake-fluid and linked vehicle-check information. Available dates and remaining distance were displayed. Missing values were identified as unavailable.

Battery history

The screen displayed six registered replacements and the mileage of the most recent one. New-battery registration was not tested.

A choice of presentation.

We checked switching between the BMW EXPERT and alternative iDrive display styles, and selecting Greek or English descriptions. Translation availability depends on the code. Original preferences were restored after testing.

Fault clearing, CBS reset and battery registration were not performed. These operations are not presented as successfully tested.

04 / COMPATIBILITY & INSTALLATION

An installation for your particular car.

The unit's name alone is not enough. We review the VIN, iDrive, software, telematics equipment and available services before quotation.

NBT EVO	Available after assessment
NBT / EntryNav	In development
EntryEvo	In development
MGU	In development

No release date has been announced for the platforms in development.

Remotely, with our technician.

Where supported, BMW EXPERT performs the installation remotely. Suitable equipment, a reliable connection and stable power support are required. This is not an automatic update through the car's modem.

TCB → ATM 4G

Conversion for eligible NBT1 / EntryNav1-era vehicles after equipment and service checks. Supports a move to NBT EVO where feasible.

No factory telematics?

We assess standalone-module retrofits for selected early 2013–2014 F-series cars. Module, wiring and antennas require physical work on the vehicle.

Connected apps require an active ConnectedDrive subscription. Availability depends on the vehicle, region, service support and mobile networks.

05 / TEST CATALOGUE · 25.10.2026

The picture, accurately.

This session's tests, recorded results and untested functions are identified separately. One demonstration vehicle does not establish identical coverage across all vehicles.

iDrive and ConnectedDrive menus

Verified

App entry and return to the actual iDrive home screen.

Weather and detailed forecast

Verified

Current conditions and the next-day breakdown loaded successfully.

Online Search and business details

Verified

The BMW EXPERT search returned a listing with an address, phone number and opening hours.

News

Verified

An initial service error was followed by a successful retry the same day: headlines loaded and an article opened.

Fault-memory reading

Verified

Fresh read on 25 October 2026: 15 of 15 responding modules were read successfully. The report was saved on the iDrive unit.

Fault explanations

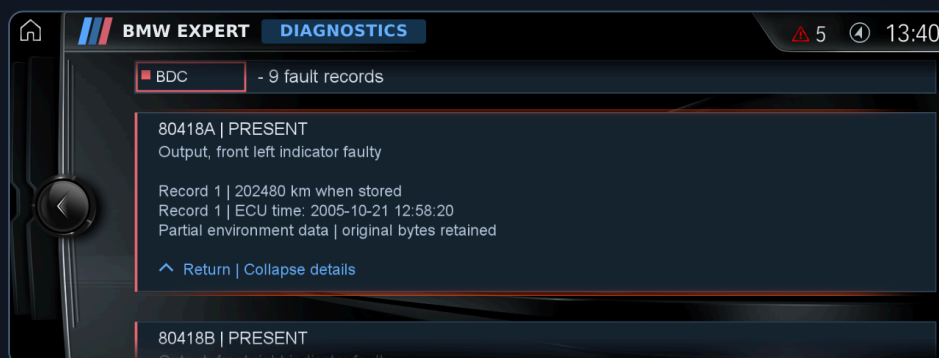

Verified

Module expansion, a code description and stored-event details were checked. Partial data is explicitly identified.

CBS service information

Verified

The read returned brake fluid and linked vehicle check, including available due dates and remaining distance. No reset was performed.

Authentic capture. Maintenance actions were not performed.

05 / TEST CATALOGUE · 25.10.2026

The limits, clearly.

This session's tests, recorded results and untested functions are identified separately. One demonstration vehicle does not establish identical coverage across all vehicles.

Battery-replacement information

Verified

The replacement count and mileage of the last registration were displayed. No new battery was registered.

Head-unit-only read

Verified

The separate iDrive-unit read returned three fault records. This is not a whole-vehicle scan.

Reports and display preferences

Verified

Saving and reopening a report, switching display style and selecting Greek/English descriptions were checked. Original preferences were restored.

Fault clearing and maintenance actions

Not tested

No faults were cleared, CBS items reset or battery replacement registered to produce this presentation.

Entry, exit and company introduction

Verified

Re-entry, connection/disconnection and the About page with its animated company introduction were checked.

Another vehicle through ENET / ICOM

Service limitation

Interface discovery completed without finding an external vehicle. Diagnosis of a second vehicle and ICOM operation were not verified.

Android Auto and future extensions

In development

In development. Not included among the capabilities presented as available.

Authentic capture. Maintenance actions were not performed.

06 / YOUR NEXT STEP

Start with your VIN.

Send your vehicle identification number and contact details. A client account and “Inquiry ExpertNBT OS” ticket are created so our team can assess your vehicle and explain the next steps.

01**VIN**

Vehicle and contact information.

02**Assessment**

Compatibility, services and equipment.

03**Proposal**

Quotation and an agreed installation route.
